00:26:04   Nicole Fabris-Carral: Can you show how to help "clean up" medication lists?….Right now we have years and years of medications showing up in the protocols. Do we always need to put in a stop date when writing prescriptions?

00:26:57   Sarah Gliech (she/her) (PCC): Fantastic question Dr. Fabris-Carral! And so relevant to new functionality we are introducing in the next PCC Release! We'll be glad to address that next 🙂

00:39:14   Jeff Couchman – Mesquite Pediatrics: Will that send the cancellation to the original pharmacy?

00:39:23   Dewey Howell (PCC):   Yes it does

00:39:32   Jeff Couchman – Mesquite Pediatrics: excellent

00:39:43   Dewey Howell (PCC):   I'll show that in just a bit

00:41:10   Nicole Fabris-Carral: I still don't understand the difference between Prescription History and Medication History.

00:41:53   Dewey Howell (PCC):   I can talk a bit about that too

00:50:14   Jeff Couchman – Mesquite Pediatrics: When does a prescription in medication history NOT have a swish (like the one on the screen now)?

00:52:18   PCC – Nat Hays (he/him):   Dr. Couchman– I believe in this case it's for the same reason you don't see the swish in the most recent Rx in Rx history; it was written on the visit we're looking at, and as such, you wouldn't renew it on this encounter

00:53:11   PCC – Nat Hays (he/him):   in 9.8, we'll be adding the new Resend functionality, which should cover the main use case of when you might want to "renew" an Rx on the same encounter it was written on

00:54:39   Jeff Couchman – Mesquite Pediatrics: I love it already!

00:56:16   Jeff Couchman – Mesquite Pediatrics: In what circumstance do we get the message that we must call the pharmacy to cancel a prescription instead of it occurring automatically?

00:57:59   Lori Storch Smith: i think this is a pharmacy issue but for our inhaler refills (albuterol for example) triggered by the pharmacy it comes through as for only 25 days and 8.5inhalers. We have to change it each time

01:03:22   Nicole Fabris-Carral: Sometimes I write an Rx, send it and then right away realize I made a mistake and/or want to change the dosage. Right now I delete the Rx and retype a whole new Rx. But then I am not sure which Rx the pharmacy is seeing (the original or updated one)….Is there a better way to do this?

01:05:09   Jeff Couchman – Mesquite Pediatrics: More hugs coming your way, Dewey!

01:05:16   Linden Weblab: :)

01:08:48   Nicole Fabris-Carral: Could you please make a 9.8 release video (instead of just the article on PCC learn) for these ERx changes? I think a demonstration would be the best for other MDs to see.

01:09:15   Sarah Gliech (she/her) (PCC): The intent is to create videos for some of the larger features, Dr. Fabris!

01:09:30   Nicole Fabris-Carral: Great thank you!
01:09:41   Sarah Gliech (she/her) (PCC):   We will also be posting a recording of this web lab.
01:09:53   Jeff Couchman – Mesquite Pediatrics: Sometimes deleting the first one doesn't work
01:21:59   Lori Storch Smith: Is there a way to organize the favorite list drop in category? like all the eye meds, adhd meds, ear meds (as examples) Currently I am using a custom search terms work around
01:22:30   Linden Weblab: Not currently – but we do have a wish for this!
01:29:19   Jeff Couchman – Mesquite Pediatrics: That's absolutely amazing. Thank you!
01:30:56   Jeff Couchman – Mesquite Pediatrics: I have to go but thank you so much everyone!
01:31:06   Linden Weblab: Thank you so much for joining!
01:40:06   PCC – Jeff Nevius: Thank you all!
01:40:20   PCC–Nicole Broderick: Thank you so much!
