

Hands On ICD-10 Preparation

Jan Blanchard
Users' Conference 2014

Outline

- Comparison of ICD-9 to ICD-10
- Identify differences and pitfalls
- Identify your most billed ICD-9s
- Begin translating your ICD9s to ICD10s

Assumptions

- Basic understanding of ICD selection
- Descriptions match codes in your ICD-9 table

Comparison

- Differences
 - MANY more codes
 - Greater specificity

Comparison (cont'd)

- Greater Specificity
 - Severity
 - Laterality
 - Dominant vs. non-dominant
 - Intent
 - Source

Excludes

- Exclude 1 vs Exclude 2
 - 1=These should **never** be coded together
 - 2= These **may** be reported together but are distinct

Code First

- Additional or related condition may need to be sequenced **before** the one in mind

Use Additional

- More detail may be available in the form of wholly separate codes

7th Characters & Placeholders

- Codes with fewer than six characters require placeholder "X" be used so the 7th character is in the 7th position. Use "X" for codes where there are more 'positions' needed than 'meaningful' digits required.

Pitfall

- Outdated ICD-9 descriptions

Let's Translate

Your Codes

- Ira will help you identify the codes you use most
- That list will tell you
 - Where to focus first
 - Which adjustments your clinicians and co-workers should consider
