# Care Management Tip

"If the treating physician or other qualified health care professional personally performs any of the care management services and those activities are not used to meet the criteria for a separately reported code (99424, 99491), then **his or her time may be counted toward the required clinical staff time** to meet the elements of 99426, 99487, 99490 as applicable."

## 2023 ICD Changes - Guidelines

“The BMI, coma scale, NIHSS, blood alcohol level codes, codes for social determinants of health **and underimmunization status** should only be reported as secondary diagnoses.”

# 2023 ICD Changes - Guidelines

Assign a code from category Z05, Observation and evaluation of newborn for suspected **diseases and** conditions ruled out, to identify those instances when a healthy newborn is evaluated for a suspected condition/**disease** that is determined after study not to be present. Do not use a code from category Z05 when the patient **is documented to have** signs or symptoms of a suspected problem; in such cases code the sign or symptom.

## 2023 ICD Changes - Guidelines

**Documentation of a change in the patient's condition is not required in order to assign an underdosing code. Documentation that the patient is taking less of a medication than is prescribed or discontinued the prescribed medication is sufficient for code assignment.**

# 2023 ICD Changes - Guidelines

**Code Z71.87, Encounter for pediatric-to-adult transition counseling, should be assigned when pediatric-to-adult transition counseling is the sole reason for the encounter or when this counseling is provided in addition to other services, such as treatment of a chronic condition. If both transition counseling and treatment of a medical condition are provided during the same encounter, the code(s) for the medical condition(s) treated and code Z71.87 should be assigned, with sequencing depending on the circumstances of the encounter.**

# 2023 ICD Changes - Guidelines

Z73 Problems related to life management difficulty

**Note: These codes should be assigned only when the documentation specifies that the patient has an associated problem.**

# 2023 ICD Changes - Guidelines

## Social Determinants of Health

Codes describing **problems or risk factors** related to social determinants of health (SDOH) should be assigned when this information is documented. **Assign as many SDOH codes as are necessary to describe all of the problems or risk factors. These codes should be assigned only when the documentation specifies that the patient has an associated problem or risk factor. For example, not every individual living alone would be assigned code Z60.2, Problems related to living alone.**
