October is National Cookie Month

PCC's Get Paid Billing Drop In

10/17/24

Vision Statement

Every pediatrician gets maximal payment for every service rendered with minimal administrative effort

Cookie shop

Drop In Premise

This is your time to ask Coding, Billing, Payer issue questions of each other ...

... and of PCC

PCC wants your input into our development of services and products

Please consider changing your Zoom name to include the state in which your practice is located to facilitate crowdsourcing based on geographic area

Pediatric BMI Diagnoses - 120% and beyond...

Clinical Record	SNOMED	ICD
Vitals Conditions / Problems	WIDE Variety	Z68.5___

One code for DOS up through 9/30/24

Z68.54
Body mass index [BMI] pediatric, greater than or equal to 95th percentile for age

THREE codes for DOS 10/1/24 and beyond...

Z68.54 Body mass index [BMI] pediatric, 95th percentile for age to less than 120% of the 95th percentile for age

Z68.55 ... 120% of the 95th percentile – <140% of the 95th percentile...

Z68.56 ... greater than or equal to 140% of the 95th percentile for age

What do we do now?

PCC is working to:

1. Address material ICD descriptor modifications.
2. Develop process to identify subset of encounters pre 10/1/24 where Z68.54 was coded AND the patient's BMI was greater than 120% of the 95th percentile for their age.
3. Discover best course to address contradiction in encounter records.

What can you do?

Practices:

1. Use diagnosis mapping to offer the best, most current choices at TOS
   a. Run the `snomedmap` report to identify the affected mappings
2. Be aware that encounters where the patient's peediatric BMI is greater than 120% of 95th percentile before 10/1/24 need explanation if Z68.54 was assigned.
