Multiple Sites Coding

The classification defines "multiple" as involving two or more sites. Follow chapter-specific guidelines for assigning codes for "multiple sites." In the absence of chapter-specific guidelines, assign codes describing specified sites individually when documented. When the specified site(s) are not documented, assign the appropriate code for "multiple sites."

Type 2 diabetes mellitus in remission

Code E11.A, Type 2 diabetes mellitus without complications in remission, is assigned **based on provider documentation** that the diabetes mellitus is in remission. If the documentation is unclear as to whether the Type 2 diabetes mellitus has achieved remission, the provider should be queried. For example, the term **"resolved" is not synonymous with remission.**

BMI codes should only be assigned when there is an associated, reportable diagnosis (such as obesity **or anorexia**) **documented by the patient's provider**.
